---

There is significant variation across Coventry & Warwickshire in terms of the proportion of children recorded as healthy weight aged 10-11 years old in 2017/18.

Wellbeing is a key issue and ONS are leading a programme of work to develop new measures of national wellbeing. People with higher wellbeing have lower rates of illness, recover more quickly and for longer, and generally have better physical & mental health. Local data on wellbeing is likely to be a key component of local JSNAs and form an important part of the work of local HWBBs.

*Data is released at CCG level, 2017/18 figures are not yet available for Coventry and Warwickshire as individual local authorities.*
Homelessness is associated with adverse health, education and social outcomes, particularly for children. Rugby Borough has the highest rate of households in temporary accommodation, although this is in line with the national benchmark.
